Role

Lead Frontend developer

Primary Tools & Technology

- React Js
- Vue Js
- Node Js (Express Js)
- React Native
- JavaScript / Typescript
- HTML5
- CSS3 / SASS / LESS
- JQuery

Professional Experience

Talent pro solution P Ltd.,
India, Senior Software engineer,
Feb 2025 – till date

Optimum solution P Ltd.,
Singapore, Senior consultant,
May 2023 – till date

Geneva Computek P Ltd.,
Singapore, Senior consultant,
Sep 2022 – Apr 2023

PERSOLKELLY P Ltd.,
Singapore, Senior App consultant,
Jun 2020 – July 2021

Optimum Solution P Ltd.,
Singapore, Senior App consultant,
Mar 2019 – June 2020

Aleph labs (Verinon payroll),
Singapore, Senior App consultant,
May 2016 – Jan 2019

Renault Nissan TBCI.,
India, Senior Soft. Engineer
Jun 2013 – Jan 2016

Infosys Pvt. Ltd.,
India, Senior Process Exec.
Feb 2012 – Jun 2013

Indiumsoft Pvt. Ltd.,
India, Senior Process Exec.
May 2011 – Feb 2012

Netaxis IT solution Pvt. Ltd.,
India, Senior Process Exec.

- Having **15** years of professional experience in **Front end development**
- Around **7+** years of experience into **React, Next Js, Redux, HTML5, CSS3, Javascript**, **Typescript, ES6** and **Responsive web design**
- Good knowledge in UI libraries like **Material UI, Tailwind CSS, Semantic UI, Bootstrap,** and **Formik**
- Strong knowledge in **Micro-frontend** driven websites in React js
- Good knowledge in **API development** using **Node Js** (express js) and **Nest Js**
- Extensive experience with MongoDB, MySQL and PostgreSQL
- Hands on experience in writing unit test cases using **Jest**, and **React testing library**
- Good knowledge in **CI/CD pipelines using Jenkins, AWS** code pipeline and **Azure DevOps**
- Good knowledge in **REST API** integration, **GraphQL and Apollo Client**
- Strong knowledge in **code optimization techniques and profiling**
- Good designing knowledge in **UX designing** tools like **Figma, Sketch and Photoshop**.

Education:

MCA., - Jamal Mohamed College, Trichy, India
April 2009 – CGPA - 8.0 [D+]

BSc., CS - A.V.V.M. Sri Pushpam College, India
April 2006 – 72.09%

Projects

Optimum Solution, Singapore (May 2023 to till date) and also (Mar 2019 to Jun 2020)

As a Lead Developer, I spearheaded both frontend and backend development for the wealth management dashboard portal. On the frontend, I used **React.js, Redux, TypeScript, and ES6** to build dynamic, **responsive UIs**, along with **Jest** for testing. On the backend, I developed APIs using **Node.js**, integrating **MongoDB** and MariaDB for efficient data management. This full-stack approach enabled the creation of a scalable, high-performance platform for managing multi-level service requests and workflows.

Standard Chartered – (May 2023 to Sep 2024)

FMSW – The project is designed to enhance request management within the banking domain, specifically for wealth activities. It features a user-friendly interface that allows clients to submit various requests, such as investment advice and fund transfers, through detailed forms. A dynamic dashboard provides an overview of request statuses and key metrics, utilizing interactive charts to visualize trends and request types. The backend includes a robust request management system that processes, assigns, and tracks requests, ensuring timely communication between clients and wealth advisors. Defined user roles and permissions streamline access and management, while real-time notifications keep all parties informed about request updates. Additionally, the project prioritizes security and compliance with banking regulations to safeguard sensitive financial information, ultimately enhancing operational efficiency and client satisfaction.

Tech Stack:
Front-end: HTML5, CSS3, Tailwind CSS
JavaScript library/framework: React, Redux, Javascript, Typescript, Jest, Cypress
Charting Libraries: Chart.js and D3.js
Backend: Node js (Express js) for API development.
Database: Mongodb
Architecture: RESTful API for communication between frontend and backend.
Hosting and Deployment: Azure Devops
Security: OAuth and JWT

TRACK – It's a dashboard application is developed from the scratch, designed for managing service requests within a wealth management domain, featuring dynamic forms with custom validation, a data grid for tracking requests, and interactive charts to visualize approval workflows. The system includes role-based authentication and authorization, ensuring that requests pass through a hierarchical manager approval process. Users can view the status of requests at various stages, while managers can approve, reject, or comment on requests. The application is built to streamline workflow management with security, flexibility, and real-time insights.

Tech Stack:
Front-end: HTML5, CSS3, Material UI
JavaScript library/framework: React, Redux, Javascript, Typescript, Jest, Cypress
Charting Libraries: Chart.js and D3.js
Architecture: RESTful API for communication between frontend and backend.
Hosting and Deployment: Azure Devops
Security: OAuth and JWT

Bank of Singapore – (Mar 2019 to Jun 2019)

CLFE & RMFE - This wealth management dashboard portal is designed to manage multi-level service requests between relationship managers and clients, incorporating dynamic forms for seamless data input and multi-level approval workflows. Developed from scratch, the portal features a responsive design, ensuring optimal user experience from tablets to large desktops, and is also converted into a hybrid mobile application. Utilizing a **micro-frontend architecture with React**, the application separates the **Client Frontend (CLFE) and Relationship**

Manager Frontend (RMFE), allowing both workflows to interact with each other while maintaining modularity and scalability. This approach enhances flexibility, making it easier to manage, update, and scale different parts of the application.

Tech Stack:
Front-end: HTML5, CSS3
JavaScript library/framework: React, Mobx, Semantic UI, Styled Components, Javscript, Typescript, Jest, Cypress
Architecture: RESTful API for communication between frontend and backend.
Hosting and Deployment: AWS
Other Tools: GIT, Bitbucket, Confluence, JIRA, Zephlin

Geneva Computek and Trading Pte ltd, Singapore (Sep 2022 to Apr 2023)

DBS Singapore – (Sep 2022 to Apr 2023)

As a Senior Front-End React.js Developer, I led end-to-end UI development using **React**, **Redux**, **TypeScript**, and **Material UI** to create scalable, responsive interfaces. I implemented a **Microfrontend** architecture for modularity and seamless integration with backend services, focusing on performance, reusability, and user experience across platforms.

Client Connect – The service request portal for internal banking operations in wealth management streamlines workflows between various levels of bank employees. It features multi-level dynamic forms with built-in validation to ensure accurate data entry and efficient processing. Hosted using a **Micro-frontend architecture**, the portal ensures that each component can be developed and deployed independently, preventing disruptions to other workflows during updates or maintenance. This approach enhances flexibility, scalability, and minimizes downtime, making it ideal for the dynamic needs of internal bank operations.

Tech Stack:
Front-end: HTML5, CSS3
JavaScript library/framework: React, Redux, Material UI, Javascript, Typescript, Webpack 5, Jest
Architecture: RESTful API for communication between frontend and backend.
Hosting and Deployment: AWS
Other Tools: GIT, Bitbucket, Confluence, JIRA, Zephlin

C4 Model – I contributed to the **UX/UI development** of this application, focusing on creating custom designs of C4 Model shapes using intuitive **drag-and-drop** features. This user-friendly interface allows users to easily design and manipulate system architecture models, enhancing the overall user experience by providing a seamless and interactive design process. My work ensured that the application was both visually appealing and functional, with a strong emphasis on usability and performance.

Tech Stack:
Front-end: HTML5, CSS3
JavaScript library/framework: React, React Flow, Redux, Material UI, Javascript, Typescript, Jest
Architecture: RESTful API for communication between frontend and backend.
Hosting and Deployment: Jenkins
Other Tools: GIT, Bitbucket, Confluence, JIRA, Zephlin

PersolKELLY, Singapore (Jun 2020 to Jul 2021)

UBS Singapore – (Jun 2020 to Jul 2021)

As a Tech Lead in the front-end development team, I oversaw the end-to-end UI development activities, ensuring a seamless and intuitive user experience. I utilized React.js, Redux, HTML5, CSS3, and JavaScript to build dynamic, responsive interfaces. I led the team in delivering high-quality, maintainable code while

maintaining close collaboration with designers and backend teams to ensure smooth integration and optimal performance.

FIF - **Financial Instrument Finder** is a wealth management application designed as a standalone search engine to help users locate financial instruments using keywords. It offers multiple filtering options, such as country, input range, date range, and types of financial instruments (e.g., equities, bonds), allowing users to refine search results effectively. The results are displayed in a table for easy viewing and comparison. Additionally, users can select and move from the filtered results to other applications, providing a seamless workflow for further exploration or transactions. This application simplifies the process of finding and navigating financial instruments, enhancing decision-making for wealth management professionals.

Tech Stack:
Front-end: HTML5, CSS3
JavaScript library/framework: React, Redux, Material UI, Javascript, Typescript, Jest
Architecture: RESTful API for communication between frontend and backend.
Hosting and Deployment: Azure
Other Tools: GIT, Bitbucket, Confluence, JIRA, Zephlin

Aleph Labs, (Verinon Payroll), Singapore (May 2016 to Jan 2019)

As a Front-End Developer, I was responsible for developing UI applications from scratch for UOB Bank, focusing on creating seamless, user-friendly interfaces. I handled projects using jQuery, JavaScript, HTML5, CSS3, SASS/LESS, and React to build dynamic, responsive web applications. Additionally, I utilized Redux for state management and TypeScript to enhance code quality and maintainability. My work ensured high-performance, scalable solutions that meet the needs of the bank's users while adhering to best practices in front-end development.

UOB Singapore – (May 2016 to Jan 2019)

Retail Payment Platform Malaysia – Retail Payment Platform is designed to handle payment operations for users coming from various shopping sites. When a customer selects a payment method, the platform integrates with UOB's payment gateway to process payments for existing UOB customers, supporting payment via **credit cards or banking**. Once the transaction is completed, the platform redirects the user back to the merchant's site, providing a response code that indicates the payment status—whether **success, failed, rejected, or expired.** This seamless integration ensures secure, efficient transactions and a smooth user experience for both customers and merchants

Tech Stack:
Front-end: HTML5, CSS3
JavaScript library/framework: React, Redux, Material UI, Javascript, Typescript, Jest
Architecture: RESTful API for communication between frontend and backend.
Hosting and Deployment: Jenkins
Other Tools: GIT, Bitbucket, Confluence, JIRA, Zephlin

Rewards – UOB Rewards is an application that allows UOB credit cardholders to manage and **redeem their reward points** accumulated through purchases. Users can browse and redeem their points for a variety of rewards, such as **air miles, gift cards**, and other products available on the platform. The application provides a seamless user experience, allowing customers to easily track their points balance, view available rewards, and make purchases with their accumulated rewards. It helps UOB customers maximize the benefits of their credit card usage by offering flexible and valuable redemption options.

Tech Stack:
Front-end: HTML5, CSS3
JavaScript library/framework: React, Redux, Material UI, Javascript, Typescript, Jest
Architecture: RESTful API for communication between frontend and backend.
Hosting and Deployment: Jenkins
Other Tools: GIT, Bitbucket, Confluence, JIRA, Zephlin

Personal Internet Banking (Malaysia, Indonesia, Thailand) – UOB Personal Internet Banking is a website designed to handle a wide range of banking operations for UOB customers. It offers essential banking features such as fund transfers, managing payees, and viewing and downloading statements. Customers can easily transfer funds between accounts, add and manage payees for future payments, and access transaction history through downloadable statements. The platform provides a secure, user-friendly interface to ensure smooth and efficient management of personal banking tasks, offering UOB customers full control over their finances online.

Tech Stack:
Front-end: HTML5, CSS3, SASS
JavaScript library/framework: JQuery, Javascript
Hosting and Deployment: Jenkins
Other Tools: GIT, Bitbucket, Confluence, JIRA, Zephlin
